

Discussion #1

[Dr. Sherri Tenpenny](#) | [Dr. Eric Nepute](#) | [Pam Popper](#)

Topics include the dangers of the COVID-19 vaccines, mask mandates, and Big Pharma's influence in politics.

Stephen Well, thank you all so much for being here. It's a real privilege, an honor to be speaking with you all today during this crucial moment in American and world history. Quite frankly, our readers have sent in a ton of questions to have you all answer them today during our discussion. And they're all very much interested in the Great Reset, the coronavirus itself, aborted baby fetal tissues for the coronavirus, and a whole bunch of other issues, too. But one topic that's been in the news lately is the issue of masks. Dr. Fauci himself recently said that we should be possibly even doubling, even tripling up on our masks wearing.

Stephen Dr. Nepute, you made a video recently on YouTube about this very topic. What is the truth about masks? Do they work? What's really going on here?

Nepute Well, Stephen, that's a great question. And here's here's the reality. The reality is this is that everybody needs to gather as much information as they can so they can make up their own decision of what they should do for themselves. You know, we're all about freedom to choose and transparency. And I really appreciate the opportunity today to share with you the data that we know. And the reality is this. Listen, there's... [00:06:15] **The only randomized control studies that have ever been done on mask show that they don't work.** [3.9s] The fact that Tony Fauci is coming out and saying that we should wear two to three mask or four mask or 11 or 20 mask, doesn't matter how many you're going to wear. The reality is this and by the way, I have three small children. And at dinner the other night, I asked them a question about lying. And we're very well, we're very transparent in our family. And I said at dinner the other night, I said, let me ask you guys a question. If somebody says that they tell you a noble lie, what does that mean to you? And they're like, Dad, that means they lied. Well, [00:06:49] **Tony Fauci, whenever this whole plandemic first came out, whenever they said, no, we do not need to be wearing a mask, he said, no, absolutely. There's no point in wearing a mask whatsoever. And then came out relatively quickly and changed his tune.** [14.1s] And then he said to the American population, well, I told a noble lie. Well, he lied to us. So if he lied about that, what else has he lied to you about? I mean, a liar is a liar. I don't know what to say, but that's just the truth. [00:07:16] **There's no data. There's no research that supports at all wearing** [2.5s] a mask is beneficial. In fact, if you look at the data that's been coming out, it's quite the contrary. And if you look at the fact, especially the study that I think you're referring to on the last video that I did, there were [00:07:29] **25,000 students that were studied out of Germany. And what they found was that 68% of these kids that were interviewed had some type of impairment.** [9.0s] I mean, we're talking, Stephen, everything from fatigue to anxiety to depression to not wanting to go to school, to headaches, to lack of concentration. I think it was some 50% of these students showed the inability to concentrate. Which when we live in a world where ADD and ADHD is already a big problem, which can be helped massively if people know what to do. But now we've got added issues with the mask. And quite honestly, it is a [00:08:04] **huge disservice** [0.0s] that we're doing to our community, especially to our children, forcing them to do this. Now, Tony Fauci did also say that in the Spanish flu in 1918, the number one cause of death was respiratory bacterial infections. And [00:08:18] **if you look at what's happening right now and if you look at death certificates and you look at correlate of deaths with covid-19, what we find above all things is bacterial respiratory infections.** [9.4s] And I can't tell you as a practicing provider how many people that I see, how many kids that I see, that I never saw before at this number having respiratory bacterial infections. It's just it's absurd. And quite honestly, I don't know what to say about it, even other than the world literally has lost its mind. And common sense is just not that common anymore. And I'll just say this. [00:08:49] **If God... If God wanted us to have a mask, he'd have built one into us and we don't need one.** [4.4s] So, I mean, I can go a lot deeper, but that's really the truth right there in your readers can go and watch the videos that I've done and and other things that are out there. But the truth remains is that everybody needs to to look at the data, look at the research. Even

[00:09:06]the CDC, they did 11 out of 11 studies and show that there was no benefit for this. [4.6s] On a BBC interview, Dr. Cohen, who's a BBC medical analyst for the CDC, said that there was no data that supported their decision. They felt political pressure to put out this policy. So your readers can do with that what they think.

Stephen A lot of times what we're seeing now is a lot of these videos are going viral on social media of people in stores who are refusing to wear a mask. They're saying it's their freedom and their right and they're being berated by fellow shoppers and others who are furious at them. Pam, have you seen these videos? What are your thoughts on this whole this whole mask mandates?

Pam Popper Well, first of all, I'm a World War Two buff. And so [00:09:54]this just reminds me of Nazi Germany, where, [2.7s] I mean, next they're going to put a star on my arm. Right? And because where does it stop? [00:10:02]It's a sign of submission that has nothing to do with how... And to what Eric said, [3.8s] I would add, [00:10:08]there are no studies that have ever been done on the effect of wearing a mask during all your waking hours. [5.3s] You got... My office at home is in the front of the house. I watch people walking up and down the sidewalk wearing a mask walking outside. How crazy it's all gotten. So the world is a bit unhinged about this. So there's no science to back any of this and particularly no science to back the fact that wearing a mask 24/7 or every waking minute is health promoting. So [00:10:37]the people who are consenting to this are essentially being enrolled in a clinical trial without their permission that they are not even aware of. [7.0s] And I think that that's despicable. That's a crime against humanity. So [00:10:48]virtue signaling is a...is a very familiar... This is what's used by tyrants. [4.8s] You know, you get...you have the good people and the bad people and you have the bad people displayed as contagious. I mean, a lot of people don't realize when Hitler locked all those Jews in the Warsaw ghetto, he said he did it to protect the other people from being infected by Jewish people. So this [00:11:09]is a very common tactic that's been used by criminals and despots throughout history. [3.6s] And so what you have going on is exactly what they wanted to orchestrate is [00:11:17]turning the population against each other, [1.6s] because together, if everybody was in agreement on this, we would have overtaken them a long time ago. This would have been over. They can't afford that. So they are turning the population against each other. And and they brainwashed people to think that it's unsafe to not wear a mask when actually if they would look into the facts, they would find out it's unsafe to wear the mask. One of the reasons why we do not wear masks in this office, I wouldn't allow it actually is... Think about being in here for, say, ten hours today and you're wearing a mask. I'll have to take it off to do this. You got to take it off to be understood. Phone. I have to take it off to drink water. I have to take it off to eat something. I'm handling it all day long. I'm doing exactly the same that the medical profession... What is the thing that they would have said a year ago you should not do during flu season, which is put your hands near your mouth all day long. Right? Touching this thing and then what am I doing in between? I'm picking up a pen that twenty-five people have written with. I'm picking up a phone that how many people in my office answered. So I'm making myself sick by constantly picking up stuff touched by other people and having my hands in my mouth all the time. So it's the opposite. I'm afraid of the masked people. You're the germ carriers. You're the ones that are going to infect us, not the other way around. So [00:12:34]it's just a form of brainwashing [0.8s] in the form of population control and turning the population against one another. It's not a health policy.

Stephen And Dr. Tenpenny, how long do you anticipate the requirements for mask wearing to continue? I mean, it seems that politicians, governors... I'm over here in Michigan. We have one of the worst governors in the country when it comes to this. They seem that they want to continue this on almost [00:12:56]indefinitely. [0.0s]

Tenpenny [00:12:58]That will be the plan [0.7s] and actually everything that Eric and Pam say that I would just concur with that and I would also add [00:13:05]the psychological effects of wearing a mask. I mean, it's dehumanizing [4.3s] because part of being a human is being able to look at another person and see the subtleties of facial expression. You know, the very subtleties of a mouth...the corner of your mouth or, you know, things just change a little bit. And [00:13:24]with children forcing them to wear a mask, we are training them to be fearful, to breathe...that oxygen is horrible for them and that anybody that they see that doesn't wear a mask is dangerous to them. [11.4s] And instead of thinking of people that had mask in the past where you would be afraid of the masked person, that they might be there to kidnap you or harm you or do something

like that. Instead, now we're seeing children who are like horrified that somebody doesn't have a mask on. So [00:13:51]the psychological effects have been deeply embedded, starting with children three years of age. [4.7s] So to your point, about how long do I think this is going to last? I think it's going to be here permanently, because I think if all of the governors, the president, Fauci, everybody else on the planet came out tomorrow and go, we overplayed this, we really did the wrong thing. We've now finally decided to look at the science, which they refused to do because I've looked at more than one hundred and three articles published in peer and peer reviewed medical literature that showing that [00:14:23]masks did nothing but make the wearer of the mask ill. Nothing. [3.6s] And they cause all kinds of health problems. And when Fauci says that, you know, wearing two masks or three masks, it makes it more efficient. Well, how are they defining efficacy? I believe its efficacy, meaning making people's brains work even less. I mean, [00:14:43]right now we've got less oxygen and increased CO2, which by definition makes brains not work well and causes people to have something called encephalopathy, [7.7s] which means my brain doesn't work well. And you see that glazed over look in their eyes and you go to stores and you go to retail places and they make errors. They make mistakes. They don't hand you back your credit card. They don't fill things out appropriately. And so I think when he says effective, it will be more effective... We [00:15:09]have to read between the lines of what they're trying to say. It will more effectively make their brains work less, [4.4s] which is what their goal is. Now, I think if all of those people that I just mentioned, the governors, Fauci, everybody came out tomorrow and said, yep, you're right. Now that the tallies are in, we overplay this. This was wrong. This isn't doing anything for people. I believe it would take [00:15:31]it's going to take years for people to give up wearing their mask, [2.7s] because now not only are they are people so fearful and have to wear it all the time, it's become a fashion statement. I mean, you can have the the fabric that matches your purse, your shoes. And everywhere you look, you know, every catalog that comes in the mail or the Facebook ads, everything, it's like people wearing masks and talking about it being a social statement. I think that the there would be a huge sector of the population that's going to keep wearing it for a long time because the fear based anxiety that has gotten embedded into their brain. They're not going to give it up. So how long do I think that they will order us to wear a mask? As long as it's convenient for them and as long [00:16:13]as it propagates their agenda. [1.0s] But how long will people continue to wear a mask? I think it be a very long time. And then a follow up to that real quick is, you know, people are getting the first and second dose of this vaccine. We'll talk about the vaccine itself in just a second. But people who are getting those are being told they still need to be continued. They still need to wear the mask even after. So, Dr. Tenpenny, what's going on here? Has this ever occurred that you get a vaccine and you still have to wear a mask after you've been injected with this? Well, first of all, [00:16:46]I refuse to call it a vaccine [1.8s] because it doesn't meet any of the standards by [00:16:51]which a vaccine is supposed to work, which one of them is to prevent the spread of infection, to keep you from getting sick, to keep you from being hospitalized, [8.9s] to decrease the amount of illness, to protect people from from this contagion that's out there. Doesn't meet any of those standards. And [00:17:09]the package inserts [0.5s] on both the Pfizer vaccine and on the Moderna, a vaccine both [00:17:14]admit freely, we don't think it's going to stop you from getting sick. [2.6s] So if it's not going to keep you from getting sick, but you take on all the risk of this injection, all the risk of this...of what's coming through the needle and in creating these adverse antibodies that literally are going to kill many people. And yet you still have to wear a mask. You still have to social distance. You still can't...you still can't do any of the things that you're supposed to be able to do when you get back into life. Why would you take on all of that risk and still be subjected to all this, a social tyranny?

Stephen Absolutely, and we're seeing that continue to be played out and what's really interesting about these shots, how do we know [00:17:57]what's what's actually in them? [1.0s] I mean, Pam, have you done any research into what goes into these things? We know there is aborted fetuses being used in at least some of them. Can you kind of hash out the differences between the different, quote, unquote, vaccines that people are getting?

Pam Popper Yeah, well, they [00:18:12]they all have ingredients that most people don't know about. [4.0s] And if they just looked at the list and I've even told people you can print off from the CDC website for the adjuvants and vaccines that, generally I mean, they're all including some of these things like [00:18:29]aluminum and polysorbate-80 and whole nine yards and then a whole lot of stuff you can't even pronounce. [4.1s] And one thing I've told people to do is take that to your medical doctor who wants you to get a vaccine and say some of this stuff is in this vaccine

I'm going to get. So can you tell me what these things are and [00:18:44]their medical doctors say, I don't know what this stuff is. [3.1s] And that's that should be kind of a scary that itself would dissuade. It goes to what Eric was talking about, if people would just take time to look into this a little bit. But I want to talk about this covid vaccine from a little bit different standpoint. The history of flu vaccines in the United States is horrible. Decades they have been trying to come up with a vaccine for flu, and for decades the risks have outweighed the benefits. And I wrote a long chapter about this in my book, Covert Operation, that it just defies logic that if, when they go through [00:19:23]the charade of the clinical trials [1.5s] and there are no inert, placebo-controlled clinical trials. They go through all of that and the vaccine consistently is more harmful than useful. What would we expect with [00:19:39]this warp speed thing that they just did? They skipped all the steps that made the last batch of ineffective vaccines that went on for decades. [6.9s] So this we have no possible hope that this could actually be either safe or effective. And the lack of efficacy is one thing. The safety issue has probably more to do with the adjuvants than it does to the actual vaccine itself, although we don't have any safety data that's that's real on that either.

Stephen Dr. Nepute, your thoughts.

Nepute Well, there are a lot of things that concern me about this. And [00:20:13]I hesitate to say vaccine as well, because, like Dr. Tenpenny says, it just it's not a vaccine. It's a...it's a whole different delivery system for genetically modifying your body. [10.4s] I mean, if you think about what it does, if you think about what it does, I mean, the whole idea behind this this vaccine, if you will, [00:20:31]is it causes your body to make antibodies to that spike protein. But what we don't know is, we don't know what all cells in our bodies are affected with those spike proteins. [10.6s] And that's a scary thing. I mean, that affects heart tissue, that affects lung tissue, that affects everything in the body. And that's very scary. [00:20:50]That's why when people get this injection, they have all these horrible side effects afterwards. [4.5s] And one of the things that really scares me the most about this particular, at least what's in the vaccines right now is [00:21:01]the polyethylene glycol that's in it. I mean, the fact that there's a hypersensitivity that most humans have to that chemical that's never really been studied in a vaccine before...never been studied into a direct injection before. It's not good. [13.9s] You hear...here's what's sad and this is the reality. The mainstream media is not reporting the truth about what's happening [00:21:24]if you go to the CDC site and look at the vaccine adverse reaction list there, [5.1s] the documents that are there are quite compelling to go, wow, there's something going on here. I mean, and if you look at social media, literally, social media accounts are being...are being deplatformed because [00:21:40]people are posting their own individual reactions that they've individually had. [4.3s] That somebody...you can't tell that person who experienced that injury, that that didn't happen. That wasn't real for them. And there are...there are thousands and thousands of those that have been reported just from social media alone and have been reported on the vaccine adverse reaction side on the CDC's website. And so if you think about all of those combined, it's really quite a...it's really quite a conglomeration of just dis- and misinformation. And if...if there's nothing to hide, right? If nobody has anything to hide and really we all care about transparency. That's what everybody says anyway. But [00:22:19]the lack of transparency, that's we're seeing is appalling. So the polyethylene glycol is a concern. [7.3s] Obviously, a lot of the other things that the new vaccines that are...that are coming down the pipe, that are putting remnants of other viruses in it. That scares me even more than these vaccines scare me. But I got to be honest with you, I really want to hear what Dr. Tenpenny has to say about this. She's the queen bee guru of this topic. I'm going to tell you right now, nobody knows more...nobody knows more about this stuff than Dr. Tenpenny does.

Stephen Dr. Tenpenny.

Tenpenny Well, it's [00:22:58]we do know that the spike protein cross-reacts with at least 27 different types of tissues. [6.5s] There was a study that just came out recently like, well, they're all pretty recent in the last couple of weeks where they took 55 tissue types and they put them in little wells and then they put the serum in them that contained the spike protein...the antibody to the spike protein and it [00:23:21]cross-reacted with 20...with up to 27 different types of tissues. [3.9s] And [00:23:26]one of the things that it cross-reacts with the greatest is, is the lining on your mitochondria and your mitochondria are the little organelles inside of your body that create your energy. [10.9s] And one of the most profound side effects that we've been seeing from this vaccine, the shot, I have to stop calling it a vaccine. I just have to, like, retrain my brain to stop

saying that because it's not a vaccine. ...is that is [00:23:50]profound fatigue. [1.0s] Absolutely profound fatigue. Well, if [00:23:54]this antibody cross-reacts with the surface of mitochondria and mitochondria are your energy makers, which makes the ATP, that's like the gasoline to drive your car, and it stops doing that. So the profound body muscle aches and pains, the profound fatigue is because it's being attacked with the antibody created by this shot that is ostensibly there to keep you from getting sick. As [23.4s] a matter of fact, Stephen, I've mapped out seven different distinct pathways, seven different pathways on which [00:24:25]this antibody to the spike protein is going to be detrimental to human health [4.5s] and is going to kill many people, kill many people. People are not going to necessarily die when you first get the injection. Now, [00:24:38]some will that have the anaphylactic shock to the polyethylene glycol they [4.0s] referred to as Peg that Dr. Nepute was mentioning. Some will, because they've said that you can get this anaphylactic reaction up to 30 minutes after the injection. Which kind of plays to why do we have drive-by, shoot 'em up sites in parking lots of grocery stores that people just drive up, stick their arm out the window and get a get a shot and then drive down the road and then maybe 30 minutes later go into anaphylactic shock. No medical care, no way to to to control their vehicle or any of those things, I think is high liability for everyone, including the people driving down the road that haven't had a shot. And so, you know, that's one of the [00:25:19]ways. There's several other different ways that this antibody..that [2.8s] is, let me take one step back from that and all previous vaccines. All of them that are on the market, the goal of the vaccine people is to inject this foreign matter, to develop an antibody that [00:25:34]they define as you being immune, that that's supposed to keep you from getting sick. This this shot doesn't behave that way. It creates an antibody that is a different type of antibody called a non-neutralizing antibody. And it actually has a mechanism of action of where it grabs hold of the messenger RNA or the whole of...the whole virus, the whole coronavirus, drags it into your cells and starts replicating. And that process is called antibody dependent enhancement. They [33.5s] call it ADP for short. And what that does is [00:26:11]instead of protecting you, if you get exposed to that pathogen, what it does is it makes you sicker, turns on all of the autoimmune cascades that have been created by this antibody and starts to attack your liver, your lungs and your kidneys. That antibody can literally go inside of your lungs and kill your lung tissue. It attacks your alveoli and the alveoli or the little air sacs at the end of your bronchioles, where the exchange happens between oxygen in your lungs and blood. And if those start to break down when people get this...get the shot, and anywhere from six weeks to six months later, they go into the hospital with shortness of breath, coughing up blood. They get an X-ray. You see all these infiltrates. [46.3s] They're going to be treated as either a pulmonary embolism, as a pneumonia or something called RDS, which is adult respiratory distress syndrome. They're going to be treated like they have a lung pathology and all the powers that be and all the doctors that never bother to study any of this stuff are going to go, oh, it's a mutant virus. We have to vaccinate more when in fact, [00:27:19]what these people are actually experiencing is the antibody created by the vaccine...by the shot is going in and destroying their own tissue. [8.8s] That's one of of seven mechanisms of how this does that. Does the results of this...of this shot is going to [00:27:37]cause an autoimmune cascade? [1.1s] Make many people deathly sick and kill people? Now, how do we know that's going to happen? Because they've been researching this since 2002 and the same thing happened in all of the animal studies. [00:27:49]It was why the animal studies were never allowed to progress to human studies by the FDA because it said you can't prove safety in animals. We can't let you do this to humans. [8.8s] But, oh, wait, this vax...this whole covid thing...we're going to bypass all those animal studies and go directly to humans because we already know what happens in animals. We don't have to do that again. [00:28:10]We know they all die. Let's [1.4s] just go right to humans. And that's exactly what's happened.

Stephen What to what extent does this injection affect people of different ages differently? There's been reports in the last two months or so of people like Hank Aaron, the famous baseball player, and and Larry King, the former CNN host who are both in their late 80s. They both got this injection and within, they said, a couple of weeks, they both passed away. And when we reported on that at LifeSite, we put that on our Facebook and we were accused by Facebook of having misleading information, putting out fake news, essentially. What...is there any connection to? If you're an elderly senior citizen, is there...is there a more likely response that you're going to get to this as if you are a younger person, Dr. Tenpenny?

Tenpenny Well, the most recent VAERS reports that just came out a couple of weeks ago, VAERS is the Vaccine Adverse Event Reporting System. It's a passive reporting system. Anybody can

report. But in the first six weeks, we started this mass vaccination campaign, the first part of December, and this report was dated that as of [00:29:22] January 15th of 2021, there have been 181 reported deaths. [6.2s] When you go through and you read all [00:29:31] the horrific ways that these people died and they reported all the horrible types of side effects that they had from cardiac [6.8s] arrest battery to severe pain syndromes to all kinds of things. [00:29:43] A large number of them were senior citizens. [2.1s] However, there was also a large number of them in their 30s, 40s and 50s. So I think [00:29:52] comorbidities can happen with people at any age. [2.3s] Dysfunctional immune systems could happen at any age. So I think that we're going to see an [00:30:02] increasing number of people in their early 30s, 40s and 50s, particularly when they get this second injection, that we're going to start seeing the same types of things. [9.5s] I personally believe it's the reason why in the UK they've now decided that, oh, we don't need to get that second injection within three weeks.

Tenpenny It needs to be within 12 weeks, maybe 15 weeks, because we're seeing so many side effects and so many adverse events of effect effects from the first injection. [00:30:30] If we do the second injection in three weeks, that number is going to go through the roof and then people are going to connect the dots. [6.8s] Well, they don't want people to connect the dots that the second shot made them even sicker. So [00:30:41] we'll just move it out to like 12 weeks [1.7s] and you let these things sort of settle down a little bit before it comes in. So the elderly, I don't think, are any more susceptible. And my opinion, I'd like to hear what Dr. Popper and Dr. Nepute say. I don't think that they're any more susceptible to the adverse effects of this of the shot than the younger people. I think [00:31:01] everyone is going to be equally damaged now. [2.2s] Elderly people have weaker systems. They have more comorbidities. They're generally on more pharmaceutical medications which clog up their system. So they may be more susceptible for those comorbidity and just the fact that they're old. But I think young people are going to we're going to find young people are equally susceptible to that.

Pam Popper Yeah, I would I would add to this one of the problems is that when [00:31:26] these clinical trials are done, [1.2s] if we could even call them that, and it's not just limited to this particular group of vaccines or vaccines in general, this is pervasive across all drugs. Perfect patients are enrolled in the...in the trials. Right? So you get somebody who's 50 years old, doesn't take any drugs. They don't have hypertension. They're not particularly overweight. Nothing's wrong with them. So this obviously is not a person who's representative of the population. So if you look at the clinical trials, there were quite a few side effects noted in spite of the fact that they were perfect patients. Well, [00:32:03] most of the people getting this vaccine or any of these vaccines are not perfect [3.2s] patients. They represent the general population and the general population, anybody in the health care business will tell you right now, is unfortunately sick. I mean, just to put it in perspective, we lose eighteen hundred people a day in the United States to heart disease. Eighteen hundred people a day die from heart disease. Three hundred sixty-five days a year. It happened in 2018, 2019, 2020. It's going to happen this year and next year. They think it'll be worse next year than this year. So we're talking about a population of people who are sick. Okay, and so the clinical trials really don't tell you anything about what's going to happen when you vaccinate people of any age because of the perfect patient. And they will often...in these clinical trials are also not very transparent. I reviewed one of the articles published by the Pfizer researchers and the study design was developed by Pfizer. Pfizer's employees conducted the trial. They analyze the data and they submitted it to the FDA. Now, we wouldn't call that a conflict of interest, would we? So, so you know that the whole story was told. And another favorite trick of the drug companies is its inclusion criteria. You can do a whole lot of messing around with your...with your prospective subjects before you start the trial to figure out who really doesn't belong in it. And that's done all the time and we have no knowledge of that. So, So, anyway, the real answer to your question, which [00:33:33] is what can we expect from various age groups? We don't know. We're doing another clinical trial in the general population with people who didn't sign up to be enrolled in a clinical trial and don't realize that that's what's happening to them. [12.0s]

Stephen Dr. Nepute, can you speak to the impact, really the control that that Big Pharma has on our entire medical system? It was alluded to by Dr. Popper, just in her response there. It seems that it's universal. It's really difficult to get around anything that these medical...I wouldn't call them medical...pharmaceutical companies are putting out there and into our...they want to put into our bodies.

Nepute Well, let's just say this. I mean, let's go back to the old statement that [00:34:17] **he who controls the gold makes the rules.** [1.9s] And that really is what happens. And if you think about the amount of money and the lobbying that's spent in Congress and in government by Big Pharma, it just it it blows everything else out of the water. And if you look at the relationships that Big Pharma has with control over government, we're seeing it right now. We're literally seeing right now the CDC, even the World Health Organization and NIH, as well as the FDA that have cut corners, have literally, you know, and Dr. Tenpenny can speak to this as well. The fact that there's...think about this, Stephen, [00:34:56] **there's normally 17 points of criteria that have to be met for a vaccine to to get emergency use. Authorization of these vaccine manufacturers came nowhere near close to doing that.** [9.3s] **But yet [00:35:06] they were still able to get approval for this vaccine as an experimental shot. And** [4.5s] if you think about the fact that, well, you know, we originally said there was no data out there to support giving this shot to expectant mothers. But yet the FDA in the United States and hospital organizations decided to go ahead and do that. Until just recently, the World Health Organization stepped in and said there's just not enough data for this. So if you think about those facts in conjunction with the years and years of medical cartel and big pharma mafia that's out there, I mean, look at this. I mean, we were told years ago that, you know, opioids were good for us. And how did Vioxx work out? I mean, all these things that people just need to look back. It's like, you know, I'm a big fan of history, like like Pam is. If we don't know our history, we're doomed to repeat it. And we're absolutely repeating a lot of our history right now because of the fact that... Well, it even says in the Bible, without knowledge, my people will perish. And that's the biggest problem we have right now, is the lack of knowledge secondary to the suppression of information. And Big Pharma has a tremendous amount to do with that.

Stephen Yeah, and so does the likes of the World Health Organization, Klaus Schwab and of all people, Bill Gates, who is...who has made his post-Microsoft career on being basically a population control activist. So, Dr. Tenpenny, I don't understand how people can put their trust in someone like Bill Gates, who's actively out there saying there should be fewer people in the world. And he's the one leading the charge on what's going into our bodies. And as we've been talking about for the last half hour or so, the ingredients in these in these injections are we don't even sometimes know the reaction that we're going to get so.... And there's been reports also of by the World Health Organization saying if you are pregnant or if you're under 18, that you should not get this vaccine because there can be birth issues and reproductive issues. Why are people looking to these individuals? I mean, it sounds like a complete oligarchic system where we're putting our trust in the absolutely wrong people.

Tenpenny Well, I totally agree with that. [00:37:10] **Trust in the wrong people. First of all, we should be putting our trust in God and not in people at all.** [5.0s] And second of all, I've never heard that that phrase before. And I'm going to co-opt it. Population control activist. I really like that a lot. So that's a really good, really good label for Bill Gates and some of these other stated Satanists and known eugenicists, you know, that that's what they've been talking about. And so [00:37:38] **the same people who would want to depopulate the planet, cause infertility, you know, cut those things down, are the same people who supposedly care so much about you? To develop this whole vaccine program to save you and make you safe?** [14.9s] I mean, people have lost their minds, you know. And now the good news is, is that, you know, I tend to be a glass is half full kind of person and I like to take lemons and make lemonade and so out of them. And so the good news is about this whole vaccine program is that. You know, I've been doing this for 20 years and well over forty thousand hours of my life. And I've been trying to get people to just ask the question, what's coming through the needle? Do I really need this? And what the side effects? I've been trying to get people just to step back a little bit because we have a two hundred year multigenerational indoctrination that vaccines are good. They're safe. They're necessary, and they don't cause any harm at all. So what ends up happening with this is that is is now the people were shut down, Locked in. Heard Fauci and all these other people standing around there going, wait a minute. [00:38:47] **Fast-track. No animal studies. No long-term studies. Might cause infertility. People are having anaphylactic reactions. Wait a minute. Maybe maybe I'll just wait.** [11.7s] And so we've swung... So [00:39:01] **the good news out of the shut downs and the lock ins and all that stuff, is now people are looking at this for the first time ever. That maybe they've never, ever looked at it before in their life.** [8.6s] And so we've swung the needle from... They did some studies early on in this whole process that about 70% of people said early on. Yes, as soon

as the shot is ready, I want to take it. I'm in. And then now one of the more recent studies was only 43% of the people said yes. And up to and the other 60% of people said either absolutely not or I think I'm just going to wait. I'm just going to see what sort of happens with all these experimental things and experimental ingredients. So I do believe that there's a certain subset of the population that have said, no, I'm just going to wait. But they...these people are smart, Stephen. They're really, really smart. And they've been working at this. If you go to the weforum.org or intelligence.weforum.org and you [00:39:58]look at the...it's the World Economic Forum's plan [3.0s] and you watch their little video, [00:40:03]they tell you right up front. We've been working on this for 50 years. You know, we've been trying to get total coopted control of the world, lower the population, destroy the middle class, move everything into big box stores, take away your freedoms, make you to be the subservient slaves, move you into the transhumanism movement, artificial intelligence, hook you up to the cloud and introduced the Chinese social credit score. People working on this a long time. No money. The cashless society, they've been gunning towards that for a long time. And now we see it happening. [32.5s] And so... But there's a certain percentage of people that are going, wait, wait a minute, I see what's happening here. The problem is, is [00:40:45]they've taken away a lot of our ability to fight back in terms of communication. [3.1s] And that's where the whole censorship thing comes in. They've taken away our ability, you know, when they went from fifty people to twenty people to ten. In terms of your ability to congregate, I mean, go all the way back like what Pam said about World War Two or even further back, the Revolutionary War. I mean, how did people get together to plan the revolt? In pubs and bars and churches. You know, they got together and they said, we're not going to put up with this. What is this tyranny stuff? And they they marshaled the militia and they put their whole plan together. Well, they've stopped us from congregating in churches. They've stopped us from congregating in restaurants. They've taken away our social media connections on our big platforms. It's all about control. I mean, [00:41:29]it's all a planned mechanism way to dehumanize us, to separate us, to not touch each other and not shake hands, [8.8s] not do any of those things to dehumanize us [00:41:41]so that they can put us into an enslavement system of total control. [3.0s]

Stephen So I want to I want to bring Pam in on this very, very topic, and I want to read a quote from from Klaus Schwab, the World Economic Forum president, and he wrote this about his book on the Great Recession. I'll read the quote here. "Anyone who reads this book will see that it is an analysis of the consequences of the pandemic that reveals fundamental flaws, fundamental trends, rather, and not a recipe book for a total surveillance state or a Marxist system." What is your first reaction when you hear that from Klaus Schwab?

Pam Popper Well, I have to insert something and then I'm going to answer the question you brought up about the oligarchs and these tech giants being in charge of health care. I think humor sometimes is helpful. And the guy that creates these satirical videos said about the same thing. He said, when my kids are sick, I take them to the computer store. That's generally where you [indiscernible]. Right? So definitely we want people who made software in charge of our health for sure. Right? Well, I think [00:42:46]the first thing when when criminals and despots and communists and dictators are taking over a country or a society, the first thing they tell you is they're not doing it. Right? [11.0s] I mean, I've never...I've never known anybody with criminal intent who set out in the beginning. I mean, Bernie Madoff didn't say, listen, I want to be a billionaire and I'm going to take a lot of money from people. Here's my plan. Right? He was very careful about disguising it. And there's a lot to be learned from history. Again, you look at how do...how does a guy like Bernie Madoff steal all this money? He got good at selling scarcity. You have to know somebody to get in to see him, to invest with them because he was too busy to deal with normal people and all that. [00:43:27]So Klaus Schwab's book is quite disingenuous in his denying what he has in mind is completely in opposition to the videos that Sherri mentioned are posted on the World Economic Forum's website. [14.0s] And you can watch the talks that have been given to the panel discussions at previous forums. And you see they actually disclose that. I mean, a very, very transparent about it. But then when somebody calls them on it, out of that context, they really count on the fact that people won't take the time to go to their website and watch these videos to see what they said. So one of the problems we have, and it's been going on for a long time in health care and in other things, but we're just seeing it explode all over everything right now is people don't check things out, so they repeat something. So we've got people who say something false and then it gets repeated and repeated and repeated and repeated. You say it enough. And Hitler talked about this, by the way. If you repeat something

untrue long enough and often enough, it becomes the truth. And so, unfortunately, the denials, because these people have deplatformed anybody who disagrees with them, that's become the truth because it's been repeated again and again. And just the absurdity, how people like this planning our lives. I mean, in a sane world, where we have thinking people, they would say, who the heck is Klaus and why do we care what he's saying? And [00:44:52] I'm glad Bill Gates got rich or whatever, but who put him in charge of health care? [3.7s] You know, people would ask these questions. And a lot of people in this country are I want to add something when Sherri brought up a great point about during the Revolutionary War, people meeting in bars and restaurants. You know, that's going on right now. Our Make Americans Free that meetings are taking place all over the country in people's living rooms and basements and the conference rooms of office buildings and that sort of thing. So people are finding each other. And I have faith in humanity. I think this is all going to turn out okay in the end. It's just between here and the end, it's just God awful. But it's going to be okay because humanity is going to rise up and say enough already. And I think to the point about whether the masks come off. I think they're going to come off when people start taking them off and other people say, yeah, I don't like wearing this thing either. And I think what you're going to have is, is a small percentage of people wandering around in their dazed state, you know, please don't ask me to think. I really do want to be a sheep. I'm going to wear my mask and hide in the basement and we'll let those people do that until they wear themselves out. But I really think this uprising is coming soon.

Stephen Dr. Nepute, how are you seeing things play out over the next months, years? I mean, what is your predictions for how people will respond and what actions do you think the tech oligarchs, our politicians are going to take in response as well going forward?

Nepute Well, isn't that the multitrillion dollar question? What's going to happen? Right? It's that's what we ask ourselves and other people every day. And, you know, all I know is that for me, it's simple because my faith is huge. Right? And and, you know, Jesus said you have the faith the size of...the size of a grain of a seed of mustard can move a mountain. Well, I've got the faith the size of a mountain so I can move whatever I want to. So I'm not too worried about that. But what I think is going to happen is really what what Pam just said, and I'm all about being a part of this movement as well. And I know a lot of your viewers are a lot of people you interview are, as [00:46:53] we need to be, the ones to let our light shine so that we can unconsciously give others permission to let their light shine as well. People do what people do. [8.3s] I can promise you that if [00:47:03] we made a collective decision today... if we made a collective decision today, that millions of people said, I'm done, I'm opening my business, I'm going back to church, I'm taking off my mask, there would be a little bit of well...there'll be some cognitive dissonance and some discourse because of that. Right? [16.4s] However, over a couple of weeks, I would think people will go, well, they get to take their mask off. Why can't I take my mask off? You have to understand, the psychology of humans is very remedial, right? I mean, most of us...most humans think at a sixth grade level or less. I mean, you know, I always jokingly tell...when I do trainings for my doctors and I do communication speeches, I say that, you know, the average adult is nothing more than a grown up child. They still have the same problems. They still don't want to play in the sandbox with anybody else, with their own toys or anybody else's. So we have to remember that. So [00:47:54] I'm optimistic to what's possible, but I'm also realistic to realize that there's a lot of crazy things that people do in the world. [6.8s] You know, God gave us free will. So at the end of the day, we get to choose. We get to choose. We get to decide how things are going to go moving forward. We get to decide are we going to continue to play by their rules? Are we going to go by the rules that God set the rules of nature? [00:48:17] Are we going to focus on wearing a mask? Four masks? Five masks? Six mask? And by the way, see all the bacterial pneumonias and bacterial infections increase and see all the words like Dr. Tenpenny said, happen over the next couple of months or even years or so, or are we going to go? [14.6s] This is absurd. This makes no sense. There's no common sense to any of this. I am in control of my life and control of the life of my family's. I'm going to do what my God-given, inalienable rights as an American and a human allow me to do. And I hope that more people realize that and stand up to that. Will we get some pushback? Yes. Who are we going to get pushback from? The very small amount of people that want to control everyone else. And once the...once the... You know, I hate to say this, but I saw an amazing meme. And I hate to...I hate to say that I make decisions based off of Facebook memes or social media memes. But this meme I saw, I'm really thinking about getting it blown up and either putting it on the side of, like, my building. I'm in St. Louis. Maybe I'll cover the arch with it. I don't know. But it basically it's this flock of thousands of sheep. And there's

one...there's one dog that's pushing that sheep off of the cliff. And one of the sheep turns around and goes, Aren't there more of us than there is of them? Shouldn't we just go the other way? Is it really is just that simple, Stephen. And once people realize that? That we are in control and we have more power than you think, like that's when things change, man. And that truly is in my mind, that truly is the Great Awakening when we realize that God said, listen... God said that that Jesus said this. Jesus even said he said, listen, you could do greater works than I did. Well, that guy did some pretty amazing stuff. And if he said that we can do that, why can't we? You think it's hard for us to take off a mask? Well, that guy cured leprosy. That guy cured blindness. That guy, he performed miracles. Just take off your mask and do what you want to do. And by the way, the reality is this is the people who are enforcing the draconian measures, they want to take off their masks, too. They want to go back to work. They want to go to school. They want to go have a cocktail and watch a football game with their friends, because that's what they worked so hard to do in life. And I'm telling you, now is the time to take action. So that's my two cents on that.

Pam Popper I want to add something to that. [00:50:31] At the end of my...of our book, this...and our book came out in September. We hypothesize about how it ends. And one of the ways that it ends is, is millions, tens of millions of people just get up one day, walk out the door and say it's over. And that started to happen. [15.4s] Fifty thousand restaurants in Italy have opened and just said we're open. One of the reasons you see our emperors and empresses loosening things up a little bit in the various states...I mean, Newsom I don't think is a benevolent guy in California. He's got a big problem because the opening of things is going on there without him, so it's better to say, oh, we better loosen things up a little bit than it is to look and the public like you're losing control. And so I agree with with what's being said that [00:51:15] at some point in time this will gather enough momentum where it will be unstoppable. And then the people who currently I refer to as our rulers are going to have no choice but to either sort of get behind the movement and look like they're still in charge. [13.2s] So they keep the office that they're in. Or they could I mean, I've said for a long time, one of these days, somebody is going to kidnap one of these people and put them in the basement. I think that almost happened to your governor. There was some rumor about that happening and it didn't. And obviously, I'm not encouraging anything like that. But, but you get enough people all riled up and deciding to do something, and a handful of bureaucrats cannot stop them. That's the bottom line. And so we do need to know how powerful we are. And the other thing I'm going to add is we have an advantage. They don't have the people who are behind all of this, the people who are controlling us. And this whole situation, they are godless, soulless creatures. They are brains inside of functioning bodies, but they have no soul. And people like this, if you look at history, they have never prevailed. They have never prevailed. They're evil enough to use their brains to construct something like this and carry you off. But they never, ever win in the end. And so I think we can take our lessons from that and have a lot of hope for the future.

Tenpenny Amen, sister. That's really good, that's really good. Thank you for saying that, Pam. And have you ever noticed they are starting to look different?

Pam Popper And one of my one of my associates is the person who said this. We were talking about how our little emperor in Ohio, he seems to be shrinking in size. I'm not kidding. He actually looks like a smaller person. And she says, Pam, that's what happens when the soul leaves the body. And then I started looking at before and after pictures of some of these other governors and that sort of thing. I hate to call 'em that because they really don't act like that anymore. But go look at pictures of the of your governor two years before this started and last week's press conference. And you will not believe the difference in their physical appearance. They age. They didn't age two years. They've aged 40 years. They look terrible. The stress of this on them. And that gives me a little bit of pleasure, actually. I hate to say that. But I can only be so benevolent when it comes to these people and what they've done.

Stephen So let's go round one more time, and if you can share about where we can find more about you, where your writing has appeared, and for those who are curious as to getting in touch with you, is there a way we can do that?

Pam Popper Who first? I'll go first. Okay, so I give out my email address and I do answer all my emails. Pampopper@msm.com. My company's website is wellnessforumhealth.com. Our advocacy organization makeamericansfreeagain.com. We're involved in the lawsuits claiming that

the pandemic was not actually an emergency and that all of this has been done for nefarious reasons, not in the interest of public health. My latest book is Covert Operation. It reads like a John Grisham novel, but we didn't...we didn't make it up. This is just like actually John Grisham could not invent anything better than what happened last year. Right? But we're we're intent on building a voter database that is large enough that this can never happen again. And I do three conference calls every Thursday to show people how to get mobilized and that sort of thing. So if you want to...if you want to become part of the solution, more and more of us are becoming part of the solution. And this overwhelming the system with with people of faith who know that we're doing the right things and freeing ourselves from tyranny, it really is getting a lot of traction. So pampopper@msm.com.

Stephen Thank you. Dr. Nepute.

Nepute Well, so we joked before the interview today how to pronounce my name, so it's Eric Nepute, my website is ericnepute.com. But since nobody can remember that...they always spell it Eric Neptune, the best way to go and join our movement. It's really simple. We started a movement about two months ago when Boris Johnson decided to... Well, we started to move it a long time before that. But Boris Johnson two months ago said we're going to give away 2.5 million dosages of Vitamin D3 to our citizens. They're only giving away four hundred IUs a day which does nothing. So I said, well, we're going to do the same thing. My nutritional company said, [00:55:45]we're going to give away a million, which now has turned into two million bottles of vitamin D3 and zinc. So people can find us at that site, which is freevitamind.com. [7.9s] They can get that free vitamin offer that we're doing. But what we did was even more than that. We put together a 12 video series to help people think better, move better, breathe better, alkaline their body. Things they can do to really prevent sickness and disease. And quite honestly, Stephen, if... [00:56:11]You know, the big comorbidities are heart disease, cancer, diabetes, stroke, high blood pressure, all of this other stuff which is driven by driven by obesity, we put together a protocol, free protocol for people to help get themselves healthy [12.0s] so people can find that free information and join the movement because we send out stuff. Videos every day to our people that normally six, seven, eight million people would watch one video on social media. Some even 20 to 50 million. But since censorship has come in and decided what you should or shouldn't have, we only have the access to email those to you. So I would encourage you to go to freevitamind.com, join the movement, get the information. And knowledge is power, but wisdom is applying that to your life. So that's where you can find us.

Stephen Amen. Thank you for that information. Appreciate it.

Tenpenny So if people want to, you know... This has been... This whole 2020 season, I've been doing teaching and lecturing and writing about problems associated with vaccines for 20 years. But 2020 I think was the busiest year ever. I did almost two hundred interviews in between April and the end of the year, and that doesn't include my daily Instagram lives. And so if people want to know more about me, my background, and listen to a lot of what I think are probably some of the better interviews that I did, they can find those at drtenpenny.com, D.R, Tenpenny, dotcom, and just scroll down the page and and you can find out more about me and why I just didn't wake up one morning and decide to talk about this, It's been going on a long time and that some of the best interviews are there. But if you want some of the educational things that we do, my blogging site and where we send out articles almost every day is from vaxxter.com. V as in vaccine, A X X T E R dot com. And if you click on the button at the top where it says Dr. Tenpenny's blog, I have written a six-part series on what I believe is the eight parts of the covid scam. The laws and liabilities. The myth of the mask. Distancing and social tracing. PCR, the fraud of PCR testing, which we didn't even get to touch on today. You know, the virus, the vaccine, the therapeutics, and then of course, the powers and principalities. You know, this is a... I [00:58:25]live on Ephesians 6, you know, fighting...we're fighting the powers and principalities and putting on the full armor of God to go out into battle every single day. [7.3s] And so I write about that. I talk about that. I do an Instagram Live every day. Well, actually, it's not true. At Instagram Live on Tuesday, Thursday and Friday. That's called Happy Hour with Dr. T and that we've got thousands of followers that come from all over the world to share a beverage and chat a little bit and then share a word of God and pray together. And so we we have thousands of people every day that get together to pray for our safety, our health, our country, our Constitution, our Bill of Rights. And Eric's been a guest on on with us before. And, Pam, we got to get you to do that one of these

days really soon. And so vaxxter.com is the place to find...to find my articles. VaccineU. Vaccine, the letter U. I've put together a series of educational courses like what Eric talks about. It's called the Covid Series. So all of those things that I just mentioned are available in the Covid Series and it's for free. All you have to do is just register. You just go to Vaccine, the letter U dot com and sign up for the Covid Series and you'll get to drill down deep in all of these. So vaccineU.com, vaxxter.com ,and drtenpenny.com for everything you want to know about me.

Stephen Well, thank you all so very much. This has been an invaluable conversation, and it's one that needs to continue to happen if we're going to to fight back and get the truth out there. And as has been said, put our trust in God and not in man. So I thank you so very much, all of you, for participating in this and this conference and sharing the truth about what's going on out there. Thank you. For everyone who watched this discussion, you can visit LifeSiteNews.com for more information. We'll have follow up articles in the coming days and weeks, as well as more information on the vaccine and where things are going in the future. So, again, thank you all for tuning in. Thank you for all the participants today. God bless and take care.

And cut. OK, also fun, fun job, guys.

Right, thank you so much. Oh, my gosh. Wow, it was a good Alejandro.

I'm going to co-opt that Population Control Act.

I think. I think it's going to be a shot. It's a great line.

We've got tons of that stuff like come visit we really all about.

It's really awesome, actually. If you keep my grandmother in your prayers, she she took the vaccine under my family's behest and not my my parents. They're opposed to it. But, you know, my aunt, who she's living under, she says that they she needs to take the vaccine because, you know, it's not safe. And she said that she's excited to come see us again. And, you know, hopefully nothing happens. But, you know, just keeping their prayers, it's really just it's really awful what's been going on. And, you know, how could we talk to our family members who think it's a good thing? I mean.

Well, let me let me say this is because I get asked this question a lot and then I get to jump out to another one, so I apologize. But, you know, the quality of your life is in direct proportion to the quality of the questions you ask yourself and you ask other people. So I always like to ask polling questions instead of pointing a finger at somebody and telling them they're wrong or they're ignorant, just say, oh, well, that's interesting. Why would you want to take that vaccine? And then they say, whatever they say, whatever they say, like whatever their response is, most times they say, well, that it's going to prevent me from getting this infection. And then you say, really? That's really interesting. Did you know that? That's not what it does? I mean, you just don't have a conversation with them. What the CDC, NIH, World Health Organization says it may minimize the symptoms, but it's not going to prevent the spread of the disease. Doesn't change anything that we're doing in the world right now. You see, the average person doesn't understand that. By the way, one thing we didn't talk about was that there's two hundred and fifty million dollars that's being spent right now, which in the grand scheme isn't a lot of money, but there's a lot of money. Two hundred fifty million dollars that's being spent right now in our country alone to reeducate people on why they should be getting this vaccine. That's a big it's more money than we're spending on trying to show them why they shouldn't.

Well, you know, yeah, it's all propaganda. Hey, thank you guys all so much. Stephen, if there's anything I can ever do for you guys, let me know. Panjshiri Love you guys. You know that. I'll see you all soon, OK? God bless. I. Thank you very much. All right. Thank you. Bye bye. Wow.
