Colleagues

I have a hard time understanding how can we be in public health and not practice it ! The reasons can be many, but so many of us?

In order to have a better picture on how this current wave could affect us and the people we served, I ask our analyst to run vaccination data for our employee; shocker!The total number of active staff for FDOH Orange is 568. It appears that 77 employees (excluding contractors and interns) have received their booster dose of vaccine (**SUPER LOW**), and 219 employees have a complete vaccine series (**not even 50%**). 34 have only one dose of vaccine (**missing second dose and booster**).

As a list:

Booster: 77 (13.55%)
Series Complete: 219 (38.55%)
Only One Dose: 34 (5.98%)

With hose number we should expect many of us to get sick and be a vector between the work place and our families, and to impact the clients we serve. To be precise, yesterday we have to cancel all prenatal appointments in a clinic because the lack of providers. I am sorry, but at this point in the absence of reasonable and real reasons, it is irresponsible no to be vaccinated. We have been at this for two years, we were the first to give vaccines to the masses, we have done more than 300 000 (OC DOH) and we are not even at 50%, pathetic.

Dr. Pino
